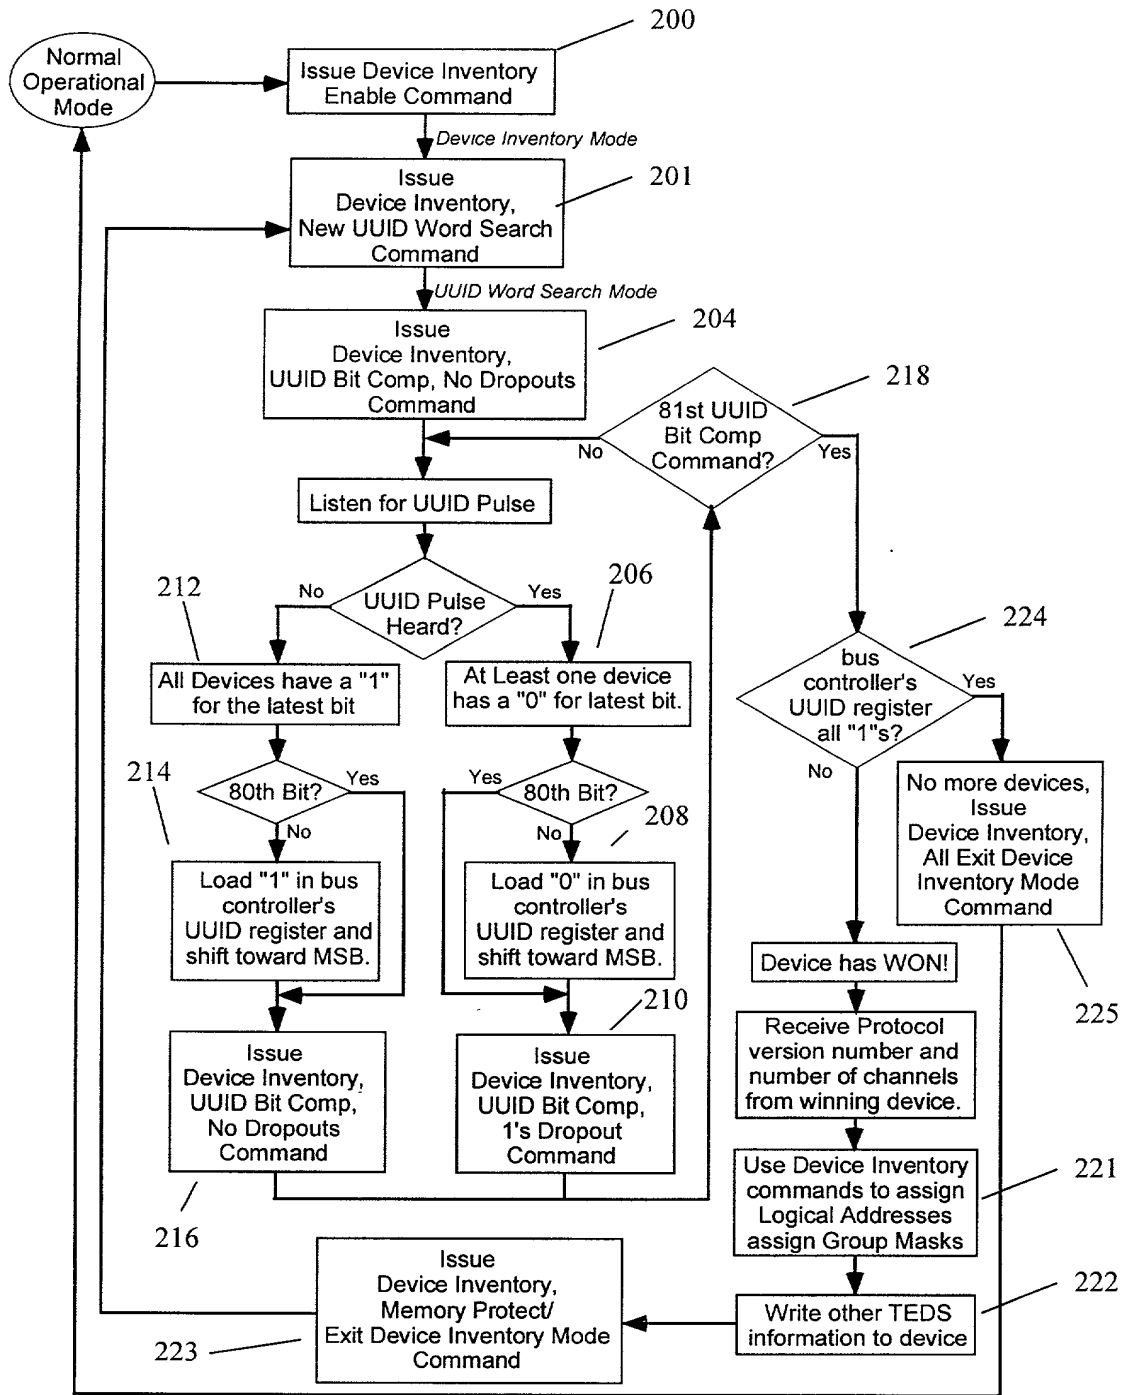

FIG. 3

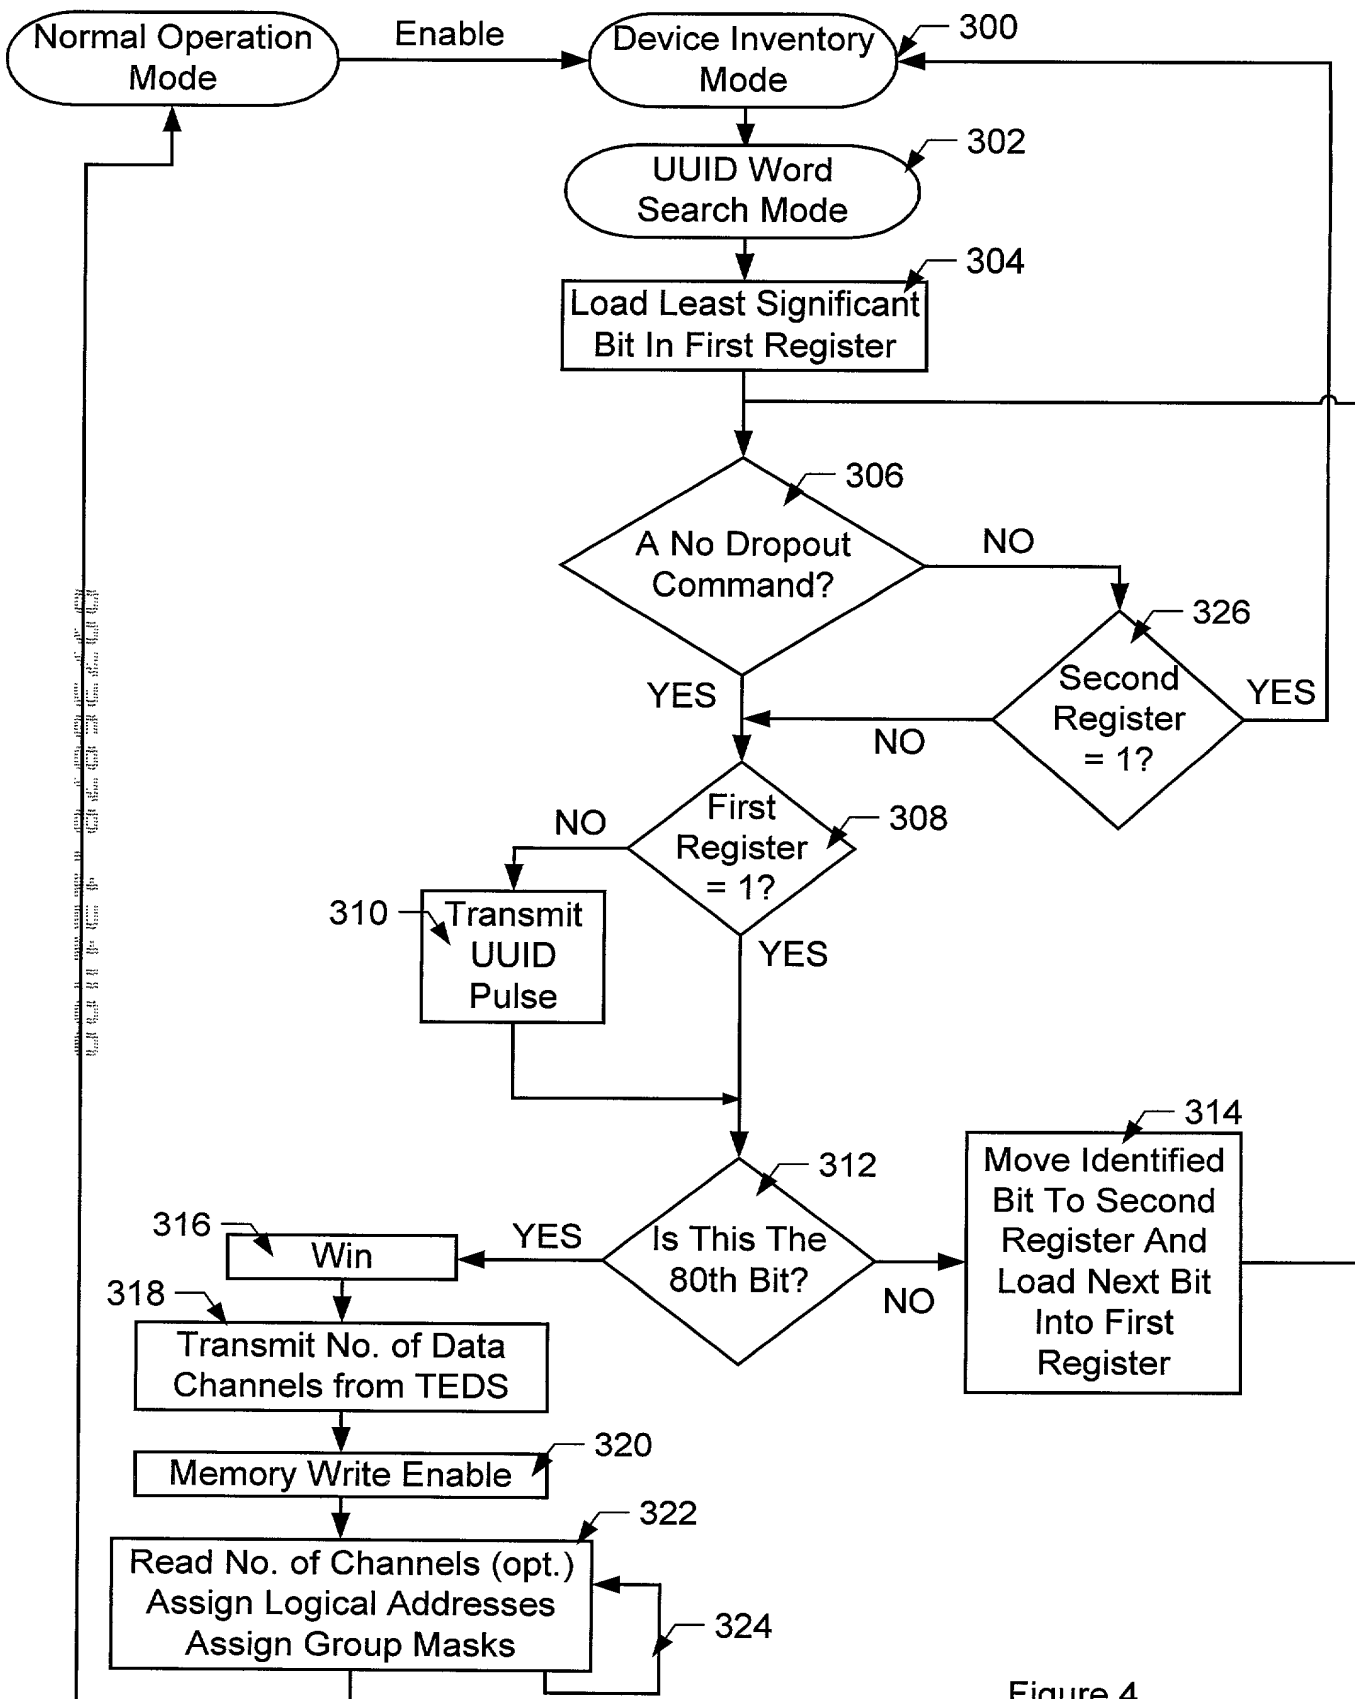

Figure 4

FIG. 5

FIG. 5 is a schematic diagram of a complex, multi-lobed structure, such as a biological organism or a mechanical component, showing internal connections and components. The diagram includes a central body (10) with various internal structures and components labeled with reference numerals. The structure is shown in a cross-sectional view, revealing internal channels, cavities, and components. The diagram is oriented horizontally, with the main body (10) extending from left to right. The structure is composed of several interconnected parts, including a central body (10), a lower lobe (14), and an upper lobe (20). The diagram uses circles, squares, and diamonds to mark specific locations and lines to connect them, suggesting a network or flow within the structure.
